

## Immunostar

### Functional activation of the immune system

#### Ingredients per capsule:

- 200 mg himematsutake (Agaricus- Blazei extract 20:1)
- 200 mg glutathione
- 200 mg inulin
- 100 mg collagenhydrolysate
- 100 mg greenteapolyphenol
- 100 mg acerolacherrypowder
- 1,5 mg sodiumselenite = 15 µg Selenium
- 400 µg folic acid

#### Consumation reference:

2 capsules a day, taken with water during a meal.

#### Common description:

The **himematsutake** is a species of mushroom. Mycel and the fruiting body contain up to 12% beta glucen (polysaccharides), which activate the immune system and because of that are said to operate against tumour celles. Furtermoren, the mushroom contains a big amounts of B vitamines, vitamine D as well as the micronutrients iron, manganese, zinc and copper. In the extract these nutrients are concentrated.

#### Field of application of the himematsutake:

- cancer prevention
- cancer therapy (immune weakness, decrease of the side effects of the chemo- and ray-therapy)
- HIV
- Hepatitis and liver strength
- Asthma
- Bronchitis
- Diabetics
- Gastritis
- High blood pressure
- Migraine
- Diarrhoea
- Allergies

**Selenium** protects the celles from unhealthy exposure and poisonous effects.

**Glutathione** is possibly the most important anti-oxidative substance for the support of the liver function, whereas mainly the detoxicative function during the converting of exogenous substances like e.g medication is enhanced.

**Inulin** is a water - soluble fibre substance which is contained, for example, in chicory. It is a great nutrient for our intestine- friendly bacteria. Inulin conveys our gut-flora and supports our gut function, alternatively the right process of the food and the cohesive positive effect on our immune function.
